CIA IMAGERY ANALYSIS DIVISION

SUBMARINE ACTIVITY SEARCH, SOUTH CHINA

A study was made of all  KH-7 aerial photography  covering Swatow, Canton, Shang-Ch'uan Shan, Fort Bayard, Ch'ing-lan, Yu-lin, Haikou, the South China Sea coastal areas from approximately 20 15N-109 55E to 24.00N-117 50E and Hainan Island for evidence of: (a) construction activity or stationing of submarines or sub-tenders; (b) significant expansion of naval support facilities at the 7 aforementioned areas, and (c) the construction of submarine support facilities on the coast of the South China Sea.

The results of the study were negative. However, oblique photographic coverage of Fort Bayard and incomplete and oblique coverage of Shang-Ch'uan Shan precluded detailed interpretation of these two areas. Approximately 10% of the South China Sea coastal area was not covered by 1965 aerial photography.
